

Sow ID:

Reason for sick pen:

Date for moving to sick pen:

Date	Diagnosis	Treatment	Amount x number of days	Temperature

Evaluation of the sow after finishing the treatment:

- If the sow is all healthy again – move the sow out of the sick pen to make room for other sick animals.
- If the sow is better, but still not all healthy, the same treatment can be repeated in the same number of days.
- If the sow is not better after finishing the first treatment, a new treatment strategy can begin after instructions from the veterinarian or the animal needs to be euthanized/killed.
- If the sow is still sick after 2 x treatment rounds, the further treatment must be discussed with the veterinarian or the animal needs to be euthanized/killed.
